

Items with Variants

by Abreeze Technology

Items with Variants is the easiest way to create an item with variants for Clover.

Instead of entering it manually at the register, Items with Variants allows you to create the items from the web. Unlike on the register, each variant is able to have its own price, cost, sku and item code or all variants can share the same values.

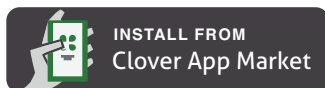

Our easy-to-use interface allows merchants to create the base item, similar to the Clover web Dashboard

Create variants (ex. size, color) and then options for those variants (small, medium). Each possible combination will have its own item in Clover.

Edit individual items as needed to give unique price/cost/sku/item code, exclude any invalid combinations

NAME (QUANTITY)	MODIFIERS	CODE	SKU	PRICE
Shirt Blue Medium				\$20.00
Shirt Blue Small				\$20.00
Shirt Red Medium				\$20.00
Shirt Red Small				\$20.00

Items are grouped together in Clover Inventory App and Register in an Item Group
